

In the Claims

This listing of claims will replace all prior versions and listings of claims in this application.

1 (currently amended). A Baculovirus comprising a vp39 fusion protein, wherein the C- or N- terminus of the vp39 protein is modified and wherein the fusion protein is expressed on the surface of the baculovirus capsid of which the capsid has been modified such that said capsid displays one or more peptides that are heterologous to the baculovirus.

2 – 4 (cancelled).

5 (previously presented). The Baculovirus according to claim 1, wherein the modification allows nuclear or subcellular targeting.

6 (currently amended). A Baculovirus vector of which the genome has been modified such that said baculovirus expresses and displays a vp39 fusion protein, wherein the C- or N-terminus of the vp39 protein is modified and wherein the fusion protein is expressed on the surface of the baculovirus capsid one or more peptides in its capsid wherein said peptides are heterologous to the baculovirus.

7 (cancelled).

8 (previously presented). The Baculovirus according to claim 6, wherein one or more heterologous genes are at least 10 kb long.

9 (previously presented). The Baculovirus according to claim 6, comprising a human gene.

10-19 (cancelled).
